

INDUSTRIAL & RIGGING SERVICES

Precision Equipment Handling Without the
Headache.

**INNOVATIVE
MOVING
SYSTEMS**

Innovative Moving Systems (IMS) specializes in the unique demands of mechanical companies, custom fabricators, and manufacturing facilities.

SPECIALIZED MOVING FOR INDUSTRY

Beyond Furniture and Filing Cabinets.

Industrial moves involve far more than standard office relocations. We are tailored for businesses that operate with heavy machinery and specialized equipment.

- Expertise in moving production machinery, raw materials, and high-value assets.
- Specialized handling for CNC machines, metal lathes, and optic tables.
- A solution designed for body shops, laboratories, and manufacturing plants—not just office spaces.

RELIABLE TRANSPORT: SEMI TRUCKS & FLATBEDS

Secure Transit from Dock to Dock.

Whether relocating across the shop or across town, our fleet ensures your machinery arrives safely. We utilize flatbed tractor-trailers to accommodate oversized loads and ensure ground-level or dock-level delivery flexibility.

Key Capabilities

- Long-haul and local transport flexibility.
- Secure transit for sensitive high-value assets.
- Integrated logistics for a seamless move.

HEAVY LIFTING POWER: SPECIALIZED FORKLIFTS

Strength Meets Maneuverability.

Our crews are equipped with a range of specialized forklifts designed to handle diverse weight classes and **facility constraints**. We handle machinery and equipment under 10,000 lbs with ease, navigating tight industrial spaces where precision is mandatory.

- High-capacity lifts for production equipment.
- Precision maneuvering for indoor positioning.
- Safe handling of crated or uncrated heavy assets.

VERSATILITY & REACH: TELEHANDLERS

Complex Positioning and
Site Challenges.

For complex positioning and hard-to-reach areas, we utilize telehandlers to ensure precise placement. This equipment allows us to operate effectively on uneven terrain or unique site challenges that standard forklifts cannot navigate.

- Extended reach capabilities for difficult placements.
- Versatile attachments for various load types.
- Ideal for outdoor-to-indoor transitions.

THE ART OF RIGGING: STRAPS & SECUREMENT

Brute Strength Requires Control.

Moving heavy iron requires more than power; it requires professional rigging techniques to protect your assets. We use certified rigging gear to ensure no damage occurs during the lift or transit.

- **Machine Skates & Jacks:** Low-profile jacks and skates for smooth floor positioning without damaging facility flooring.
- **Load Securing:** Expert strapping for fragile or high-value machines to prevent transit damage.
- **Certified Gear:** Utilization of rated straps and rigging equipment for safe overhead lifts.

END-TO-END INDUSTRIAL RELOCATION

From Disconnect to Power-Up.

We manage every aspect of the relocation with precision. From the moment we unhook the machine to the moment it is positioned in its new facility.

Crating & Securing:

Preparation of oversized machinery for transport.

1

2

Transfers: Seamless dock-to-floor and floor-to-dock equipment transfers.

3

Challenging Loads: Specific expertise with sensitive optic tables and CNC machining centers.

HEAVY MOVES, HANDLED WITH PRECISION

A recent project involving the relocation of sensitive manufacturing equipment. This operation utilized our integrated fleet of forklifts, flatbed trucks, and specialized rigging gear to safely transport and position large-scale CNC units.

READY FOR YOUR MOVE?

Trust our team to relocate your equipment safely, efficiently, and with expert care.

Don't trust your industrial assets to standard movers. Get a quote for specialized industrial and rigging services today.
